

Princess Bubble Bow

Materials Needed

1 1/2" of silk ribbon cut 45" - 60"

Wire

Cut your ribbon.

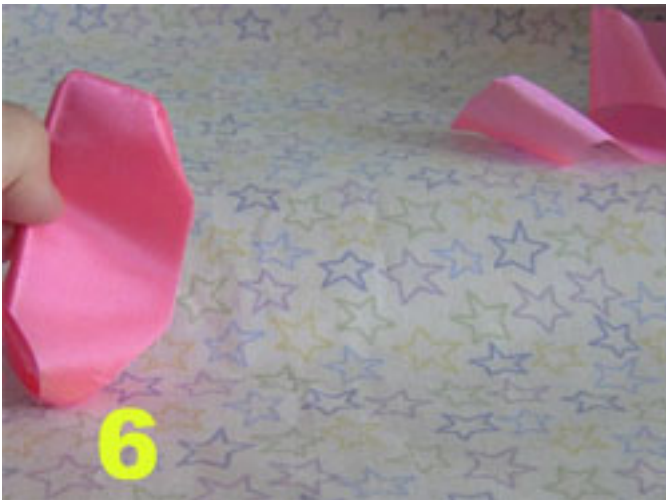

Start wrapping it very loosely around your thumb in approx. 4-5" loops

Keep on going and wrap it around.

When done cut off the ends of all four sides of your ribbon, KEEP a tight hold on your ribbon as to not shift the layers, you want the layers of your bow to be nice and neat.

Your ends should look like photo 6.

This is a bit tough to explain. Take your ribbon and shift it gently so that the corners that you cut off are not on the corners any longer but they are NOW in the center so that you can wire the center of your ribbon easier. See photo 7 verses photo 6? Your corners are not in the center of your bow and not on the edges anymore.

Now one layer by one layer separate your ribbon loops and poof them up and separate them, your princess bubble will start taking shape as you go along.
